

Interactive Web Elements

Project Overview

This project demonstrates the implementation of interactive web elements using HTML, CSS, and JavaScript. It focuses on basic user interactions, DOM manipulation, and dynamic content updates.

Features

Dark Mode Toggle

- Switch between light and dark themes.
- Improves user experience and accessibility.

Dynamic Message Update

- Changes the welcome message when the button is clicked.
- Demonstrates DOM content manipulation.

Interactive Counter

- Increase and decrease counter value.
- Updates content dynamically without refreshing the page.

Show/Hide Content

- Toggle visibility of content using JavaScript.
- Demonstrates element manipulation through DOM methods.

Technologies Used

- HTML5
- CSS3
- JavaScript (ES6)
