

PROJECT DOCUMENTATION

Project Title

Interactive Web Elements

Student Details

Name: Unnati Sharma

Program: B.Tech CSE

Organization: DecodeLabs Industrial Training Program

Introduction

This project focuses on adding interactivity to a webpage using JavaScript. The webpage allows users to interact with various elements such as buttons, counters, content toggles, and theme switching features. The project demonstrates the practical implementation of DOM manipulation and event handling concepts.

Objectives

- To understand JavaScript fundamentals.
 - To implement event listeners for user interactions.
 - To manipulate webpage elements dynamically using the DOM.
 - To create an interactive and user-friendly interface.
-

Technologies Used

HTML5

Used for creating the structure and content of the webpage.

CSS3

Used for styling, layout design, responsiveness, and dark mode appearance.

JavaScript

Used for adding interactivity and dynamic behavior to webpage elements.

Features Implemented

1. Dark Mode Toggle

A button is provided to switch between light mode and dark mode. The feature is implemented by adding and removing CSS classes through JavaScript.

2. Dynamic Message Update

A button updates the welcome message dynamically when clicked. This demonstrates manipulation of HTML content using JavaScript.

3. Interactive Counter

Users can increase or decrease the counter value using dedicated buttons. The displayed value updates instantly without refreshing the page.

4. Show/Hide Content

A content section can be hidden or displayed using a toggle button. This demonstrates dynamic control over element visibility.

Project Workflow

1. Create webpage structure using HTML.
 2. Design the interface using CSS.
 3. Add event listeners to buttons using JavaScript.
 4. Manipulate DOM elements based on user actions.
 5. Test all interactive functionalities.
-

Expected Output

- Users can switch between dark and light themes.
 - Welcome text changes dynamically.
 - Counter value updates instantly.
 - Content section can be hidden and displayed.
-

Key Concepts Learned

- DOM Manipulation
 - Event Handling
 - JavaScript Functions
 - CSS Class Toggling
 - Dynamic Content Updates
 - Responsive Web Design
-

Conclusion

The Interactive Web Elements project successfully demonstrates the use of JavaScript to create dynamic and engaging user experiences. Through the implementation of event listeners and DOM manipulation techniques, the webpage becomes more interactive and user-friendly. This project strengthened understanding of frontend development concepts and practical JavaScript implementation.
